KATALOG

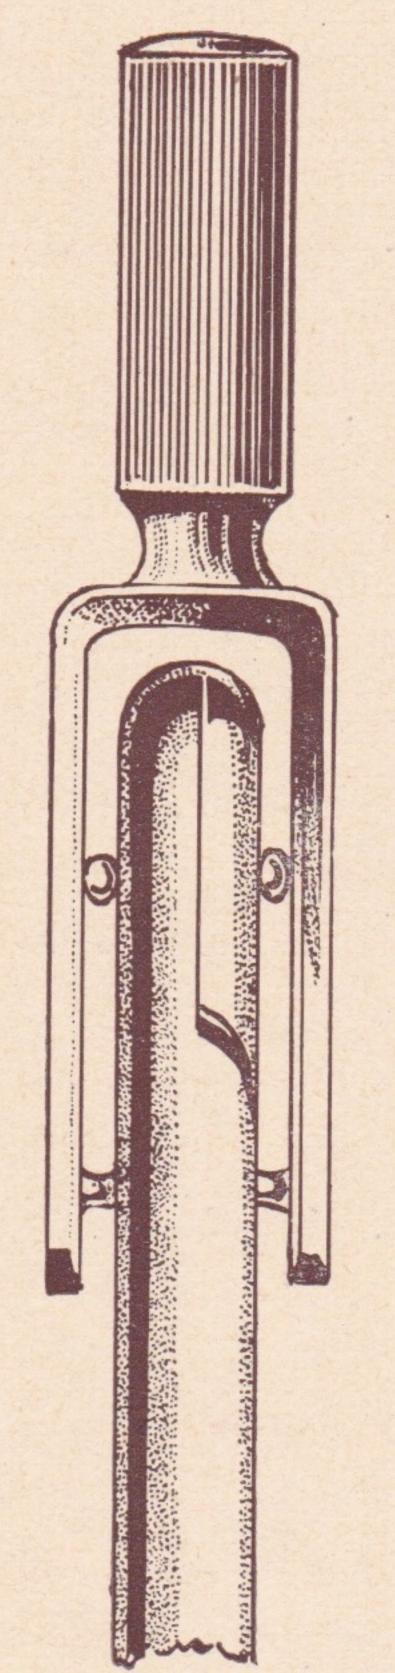

PRAZISIONS-REISSZEUGE

VORWORT · P-Reißzeuge und Instrumente

Die P-Type ist die Ausführung, die allgemein auf dem Markte als die beste Qualität für Reißzeuge bekannt ist und der früher bekannten Richter P-Type gleichkommt.

Die Instrumente der P-Type sind aus hochlegierten Schwermetallen und bestem Spezialstahl gefertigt. Wir liefern diese Instrumente verchromt und hochglanzvernickelt, rost- und korrosionssicher sowie in Neusilber und sind die Preise sämtlicher drei P-Präzisionsausführungen in unserer Preisliste aufgeführt.

Die Zirkel sind mit Schenkelgeradeführung nach Abbildung 1, die Gelenke in Kugeln nach Abbildung 2 gelagert und die Reißfedern sind mit Wendescharnier (Kreuzscharnier) ausgestattet, wie Abbildung 3 zeigt. Die Reißzeugbestecke sind in besonders geschmackvollen, solid gearbeiteten und mit gutem Samt ausgeschlagenen Etuis eingelegt. Auf Wunsch werden auch andere Zusammenstellungen als aus dem Katalog ersichtlich geliefert.

Unsere neuzeitliche und mit besten Maschinen und Betriebsmitteln ausgestattete Fertigungsanlage und unser Stamm bestbewährter Fachleute und Spezialisten, denen die Vererbung einer hundertjährigen Tradition dieser Industrie in unserem Tale zu eigen ist, bürgen für die Wertarbeit unserer Erzeugnisse.

Achten Sie deshalb beim Kauf eines Reißzeuges besonders auf unser Firmenzeichen,

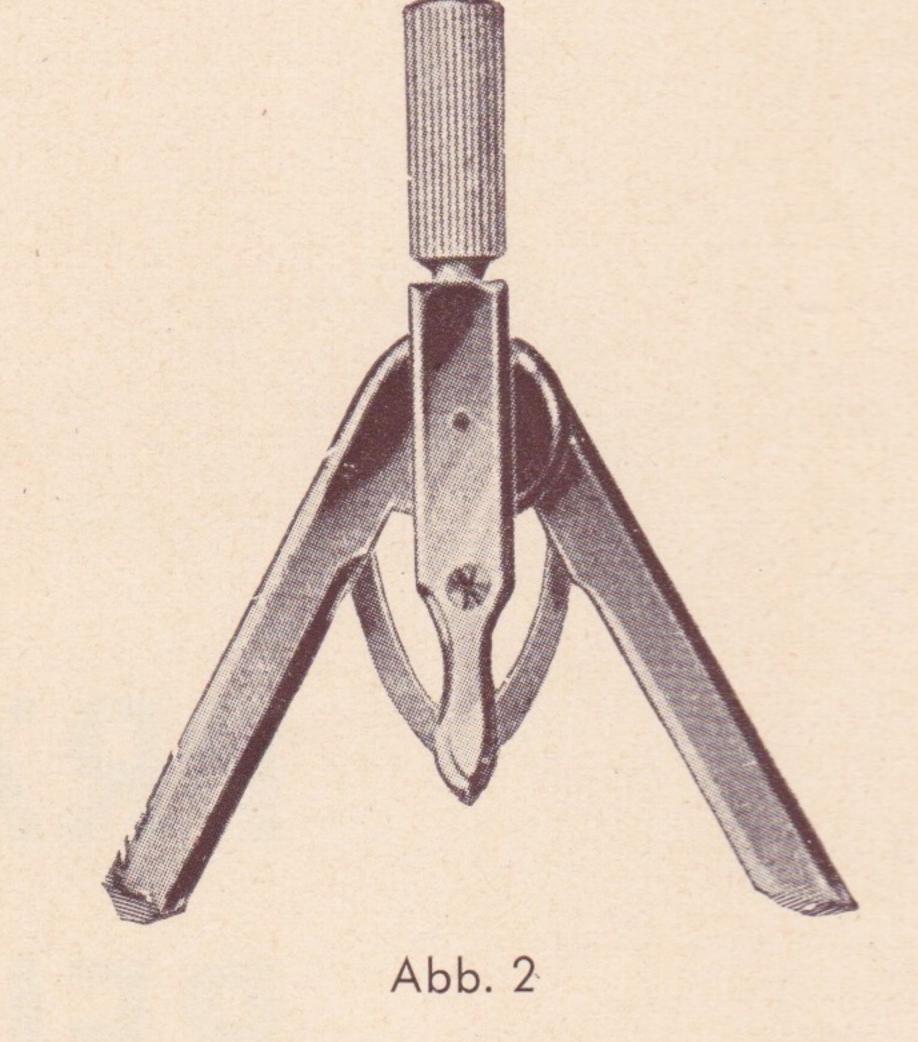

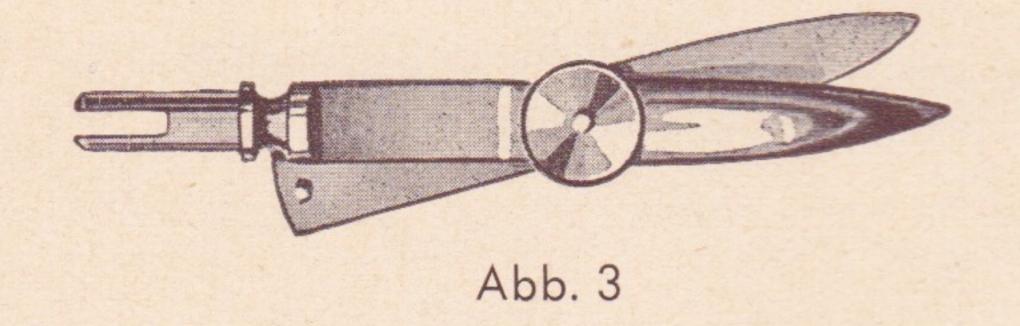

Abb. 1

mit welchem Etuis und Instrumente gezeichnet sind.

PREFACE · P-drawing sets and instruments

The P-Type precision-made drawing sets have been generally approved at home and abroad as leading quality instruments, matching to a high degree the former world famous Richter P-Type sets.

All instruments of the P-Type are made of highly alloyed heavy metal and special tool steel of top quality. We manufacture and deliver precision-made drawing instruments chromium plated and nickel-plated in a highly polished, rust-and corosion resisting finish, also in Argentan (German silver).

Prices of the 3 precision sets Type P are spezified in our pricelist.

Compass and dividers have shoulder straightening device (Jllustr. 1), the joints are mounted in balls (Jllustr. 2) and the drawing pens are equipped with reversible hinges (Jllustr. 3). The drawing tools are placed into solid-made, practically styled velvet-lined cases. If desired, also other combinations as shown in the catalogue, can be supplied.

The widespread reputation of the MAHO-drawing sets and instruments is founded on supreme quality and craftsmanship. A staff of skilled workers and specialists, deeply rooted in the century-old tradition of the homeland precision work, men who take a pride in their job, in connection with our up-to-date production plant equipped with highly efficient precision machinery, these are the dominating factors for the proven quality, dependability and long service life of our products.

If you are interested in purchasing a drawing set kindly look for and insist on the brand, illustrated on the margin. All MAHO-made instruments and cases are marked with this sign.

PRÈFACE · Compas et instruments P

Le type P est d'une exécution telle, que sa qualité est reconnue universellement comme la meilleure du marché; elle se compare au type P guidage droit précédemment connu.

Les instruments du type P sont en alliages de métaux lourds et d'acier spéciaux les meilleurs. Nous livrons ces instruments soit chromés ou nickelés finement polis, anti-rouille et anti-corrosion soit en ARGENTAN. Les prix respectivs de ces trois fabrications sont repris à notre tarif général.

Les compas munis d'un compensateur d'écart suvivant la figure I, sont montés sur billes (figure 2). Les tire-lignes sont à charniere pivotante comme le montre la figure 3. Les trousses de compas sont de bon goût, solides et garnies de velours de bonne qualité. A la demande nous pouvons livrer d'autres compositions que celles indiquées au catalogue.

Nos usines, aux moyens de production modernes avec les meilleures machines et des spécialistes éprouvés, garantissent la qualité de nos produits. La tradition continue d'une spécialisation dans cette branche plus que centenaire.

En achetant un compas faites particulièrement attention à la marque de fabrique ci-contre dont tous nos instruments et étuis sont marqués.

PROLÓGO · P-Estuches de Compases e Instrumentos

La serie P, es la ejecutión que en general es conocida en el mercado como la mejor calidad en estuches de compases, teniendo gran semejanza al famoso Richter Serie P.

Los instrumentos de la serie P, están fabricados de altas aleaciones de metales pesados, conjuntamente con aceros especiales.

Suministramos estos instrumentos cromados y niquelados all brillo y niquelados brillantemente, seguros contra la corrupción y contra el óxido. Tambien se suministran en plata alemana y los precios de las tres calidades de la serie P las encontrarán en nuestro listín de precios de exportación.

Los compases están provistos de guia central (figura 1), los movimientos están sujetos sobre bolas (figura 2), y los tiralineas son de charnela (figura 3).

Las piezas sueltas están colocadas en unos estuches de madera forrados de terciopelo de inmejorable calidad y mucho gusto. Sobre demanda se fabrican estuches con otros contenidos que los figurados en el catálogo adjunto.

Nuestras modernas maquinarias que completetan la inmejorable instalación de esta Firma, antiquisima en este valle, pues existe hace más de un centenar de años, garantizan por su tradición el inmejorable acabado, y terminado de todo nuestro muestrario.

Eijense siempre cuando adquieran un estuche de compases, en la marca de la casa que Vd. ve a mano derecha, pues todos los instrumentos y estuches van marcados con ella.

PREFAZIONE · Compassi e strumenti da disegno -P

Il tipo - P è il modello che generalmente è riconosciuto sul mercato come il migliore tra gli strumenti da disegno ed è equivalente al tipo - P RICHTER molto rinomato ai suoi tempi.

Gli strumenti del tipo - P sono fabbricati con metalli di forte lega e di un ottimo accaio speziale. Possiamo fornire questi strumenti cromati e nichelati a massima lucidatura, inossidabile e sicura da agni corrosione, o pure in alpacca. I prezzi dei tre modelli di precisione sono specificati nella nostra lista.

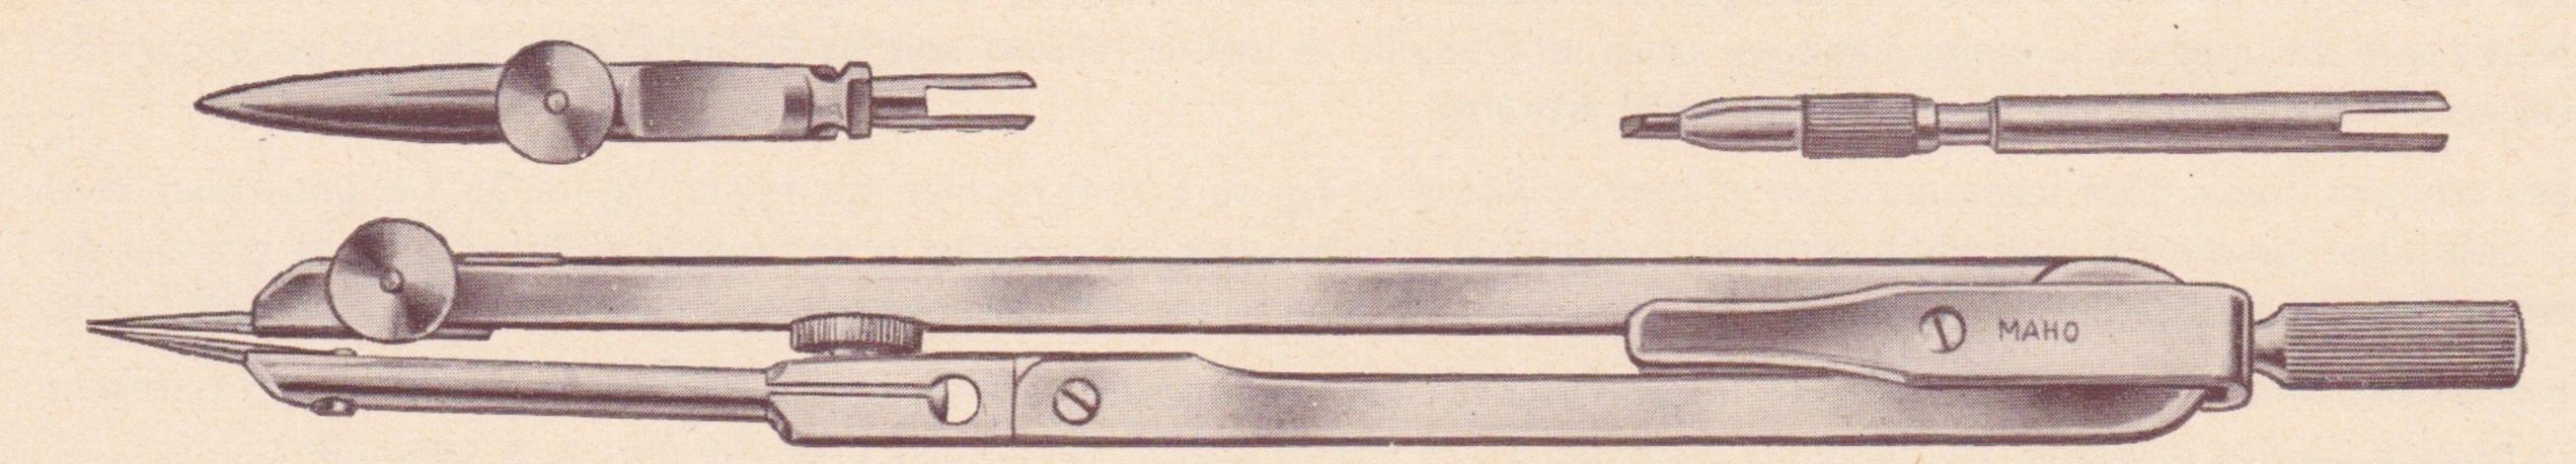

l compassi sono attrezzati a gambe diritte come dalla figura 1, le cerniere in sfere come della figure 2, e i tirallinee sono attrezzatti con cerniere girevoli (cerniera a croce) come dalla figura 3.

Gli strumenti sono disposti in bell' astuccio lavorato solidamente e foderato in velluto. Per espresso desiderio del cliente si possono fornire combinazioni diverse da quelle elencate nel catalogo.

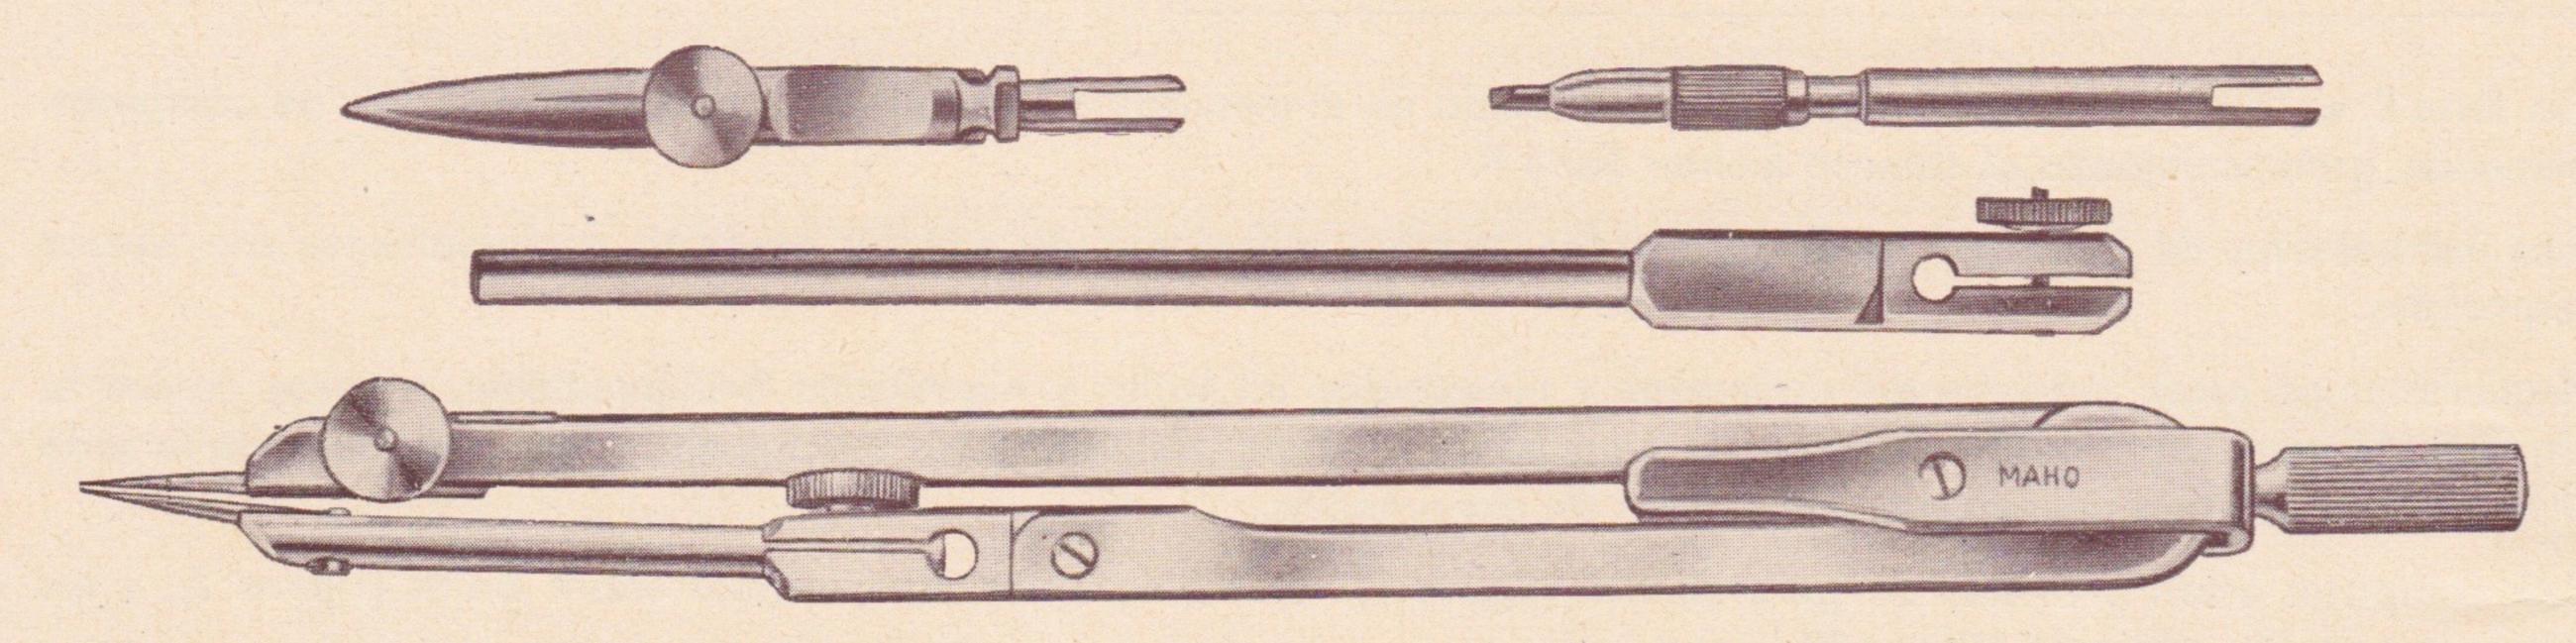

La nostra fabbrica, attrezzata coi mezzi più moderni, ha a sua disposizione specialisti ed esperti di tradizione centenaria la quale da l'assoluta garanzia di un lavoro di alta precisione.

Comprando un astuccio da disegno, assicurate vi quindi che esse porti la nostra marca depositata MAHO.

Lineale da tratteggiare in argentone, lunghezza 25 cm

MAHO-Ellipsograph DRP.

Diese Instrumente stellen die vollkommenste Ausführung auf diesem Gebiete dar. Die besonderen Vorteile des Instrumentes sind darin zu suchen, daß dasselbe schwebend über die Zeichenebene zu liegen kommt, und zwar durch einen festen Fuß in Verbindung mit einem Konsol unverrückbar in der angebrachten Lage bleibt. Durch Verstellen der beiden quadratischen Querarme, welche mit Teilungen versehen sind, können durch Verschieben der darauf angebrachten Hülsen ixbeliebige Ellipsen in Form und Größe bestimmt werden. Das Ziehen der Ellipsen erfolgt durch Drehen des am Oberteil des Instrumentes befindlichen Knopfes. Durch eine Umdrehung wird die ganze Ellipse gezogen.

Jedem Ellipsenzirkel geben wir eine ausführliche Gebrauchsanweisung bei, so daß die Bedienung desselben einfach und leicht verständlich wird.

P 45 Größe I, zeichnet Figuren mit einem Längsschnitt von 350 mm

MAHO-Ellipsograph German patent

These instruments represent the most perfect construction in this field. The special advantages of the instrument consist in the fact that it comes to lie swinging above the drawing plane and that it remains immovable in the fixed position by means of a firm foot in connection with a bracket. By adjustment of the two squre cross-arms supplied with scales any shapes and sizes of ellipses may be determined by moving the sleeves mounted on them. The tracing of the ellipses is effected by turning the button at the upper part of the instrument. By one turn the entire ellipse is traced.

We add to each elliptic compass full directions of use, so as to make its manipulation simple and easily intelligible.

P 45 size I, traces figures with a longitudinal section of 350 mm

Ellipsographe » MAHO « Brevet allemand

Cet instrument représente ce qu'il y a de plus perfectionné en ce genre. Son principal avantage réside dans le fait qu'il se trouve suspendu au dessus de la surface à dessiner, de telle sorte qu'il reste dans la position désirée, de par un pied fixe en connexion avec une console ne pouvant être déplacée. En déplaçant les deux bras transversaux quadratiques, lesquels, sont munis de divisions et en mouvant les curseurs y adaptés, on peut exécuter un nombre indéterminé d'ellipses de toutes formes et dimensions. Le tracé d'une ellipse, s'effectue en tournant le bouton se trouvant à la partie supérieure de l'instrument et d'une seule fois. Avec chaque compas à ellipse, nous joignons une méthode d'emploi détaillée permettant de s'en servir facilement.

P 45 grandeur l'effectue des figures avec coupe longitudinale de 350 mm

Elipsografo » MAHO « Patente alemana

Estos instrumentos representan la ejecución más perfecta en este dominio. Las ventajas especiales del instrumento consisten en que este está sostenido en el aire encima de la superficie de dibujar y que permanece inmóbil en la posición determinada por medio de un pie firme en combinación con una consola. Moviendo los dos brazos transversales cuadrados y provistos de graduaciones se pueden determinar cualesquiera formas y tamaños de elipses removiendo los manguitos fijados en ellos. Las elipses se trazan girando el botón que se encuentra en la parte superior del instrumento. Con un giro se traza la elipse entera.

A todo compás elíptico le añadimos instrucciones detalladas de uso, de modo que su manejo resulta muy simple y facilmente inteligible.

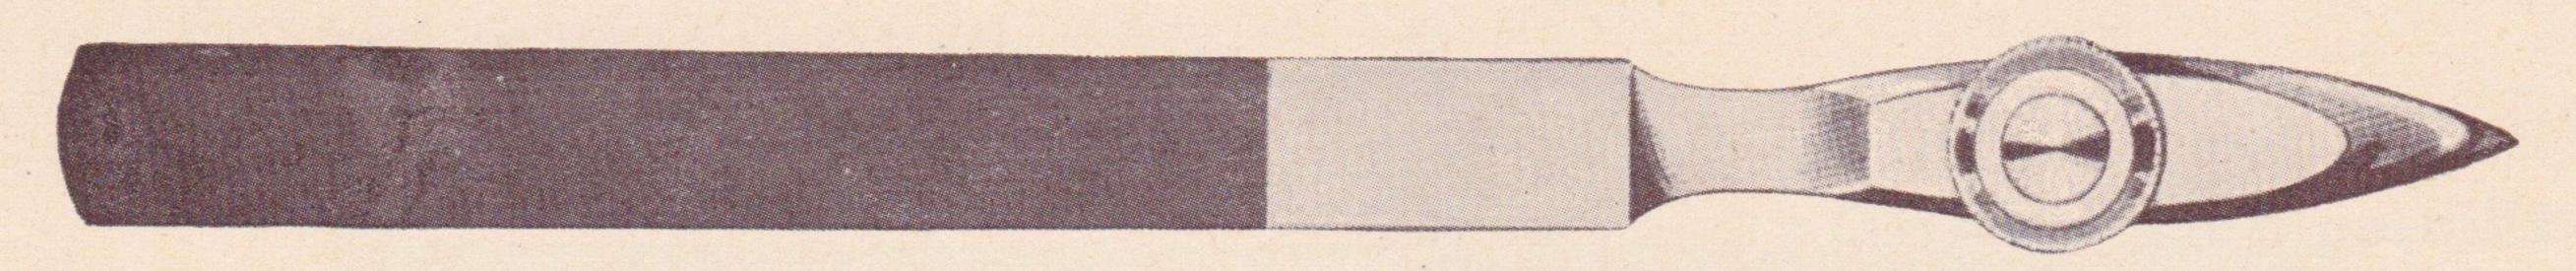

P 45 tamaño l traza figuras de una sección longitudinal de 350 mm

Elissografo » MAHO « Brevetto germanico

Questi istrumenti stanno a rappresentare quello, che v'ha di più perfetto in articoli del genere. I vantaggi particolari, che questi istrumenti presentano, sono da ricercarsi nel fatto, che l'istrumento viene a trovarsi sospeso sopra il piano del disegno e che rimane immobile nella posizione determinata per mezzo di un piede fermo in combinazione con una consolle. Movendo ambedue i bracci quadratici trasversali, che sono muniti di una graduazione, si possono determinare qualsiasi, forma e grandezza di elisse spostando il collarino, applicato ai bracci stessi. Le elissi si tracciano girando il bottone, che trovasi nella parte superiore dell'istrumento. Con un solo giro si traccia l'elisse intiera.

Ad ogni elissografo uniamo dettagliate istruzioni per l'uso, e quindi il servizio risulta molto semplice e facilmente intelligibile.

P 45 Grandezza I traccia figure di 350 mm di sezione longitudinale.
